

Shaoquan Qin

Due

Category: **Utility**

Description:

This app I am building looks like the IOS innate app Notes, but this app is used to work like reminder, for users to put tasks in a table as a to-do list. The cells in the table view is able to present the title, a due date, and a count-down of remaining time for each task. This count-down is displayed real-time both in the cells of master page and in the detail page of selected task. A system image with specified colors and styles is shown to the right of each cell in accordance with the count-down of time to provide further conspicuous alert. Swipe each cell to the left or click “edit” at the top left corner will provide two edit options, submitted/in progress or delete, which better helps to organize the tasks with particular icon displayed for submitted condition.

In the detail page of each task, a title, a due date, a count-down of time remaining and a description text field will be presented. Click on the bottom pencil button means the user wants to change the elements of the task. Both click the plus button at top right corner of master page and click the pencil icon will end up in a create/change page, where user can enter the title, the due date, and the description of current task. Click on the bottom checkmark button will redirect back to the master page.
